

**Ideation Phase**  
**Define the Problem Statements**

|               |                                                  |
|---------------|--------------------------------------------------|
| Date          | 02 October 2026                                  |
| Team ID       | SWTID-2026-5622                                  |
| Project Name  | Implement Client Script and UI Policy (Incident) |
| Maximum Marks | 2 Marks                                          |

**Customer Problem Statement Template:**

| Section             | Description                                                                                    | Details for Project                                                                                                                                                                                                    |
|---------------------|------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| I am                | Describe customer with 3-4 key characteristics — who are they?                                 | A ServiceNow IT Service Desk Agent and System Administrator managing daily Incident creation, triage, and record processing                                                                                            |
| I'm trying to       | List their outcome or "job" they care about — what are they trying to achieve?                 | Log and process high-impact incident records efficiently with accurate, mandatory details (Assignment Group, Assigned To, Urgency) while maintaining process compliance.                                               |
| but                 | Describe what problems or barriers stand in the way — what bothers them most?                  | Users frequently submit incomplete tickets, select invalid urgency levels, or bypass validation rules by editing the State field directly from the list view.                                                          |
| because             | Enter the "root cause" of why the problem or barrier exists — what needs to be solved?         | The ServiceNow Incident form lacks real-time, client-side dynamic controls (UI Policies and onChange, onSubmit, onCellEdit Client Scripts) to enforce field dependencies and block invalid updates prior to submission |
| Which makes me feel | Describe the emotions from the customer's point of view — how does it impact them emotionally? | Frustrated by manual data cleanup overhead, slowed incident resolution workflows, and unreliable reporting metrics.                                                                                                    |

**Example:**

|                                                                       |                                                                                                |                                                                                     |                                                                                                                                                            |                                                                                                                                                |
|-----------------------------------------------------------------------|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>I am</b></p> <p>An IT Service Desk Agent / Incident Manager</p> | <p><b>I'm trying to</b></p> <p>log and process Incident records accurately and efficiently</p> | <p><b>But</b></p> <p>Incomplete, inconsistent, or incorrect data gets submitted</p> | <p><b>Because</b></p> <p>Relying on manual checks allows required fields (like Assigned To or Urgency) to be missed or edited incorrectly in list view</p> | <p><b>Which makes me feel</b></p> <p>Frustrated (<i>due to impacted reporting accuracy, SLA non-compliance, and lower service quality</i>)</p> |

| Problem Statement (PS) | I am (Customer)                              | I'm trying to                                                 | But                                                                      | Because                                                                                         | Which makes me feel                                                                    |
|------------------------|----------------------------------------------|---------------------------------------------------------------|--------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| PS-1                   | An IT Service Desk Agent / Incident Manager. | Log and submit high-impact Incident records accurately.       | Records get submitted without critical information like "Assigned To".   | Relying solely on manual checks allows required fields to be missed during creation.            | <b>Frustrated</b> , due to breached SLAs, delayed triage, and poor data quality.       |
| PS-2                   | An IT Support Specialist\ Administrator      | maintain strict Incident lifecycle rules and report accuracy. | Users alter fields like Urgency or modify State directly from list view. | There are no client-side UI policies or validation scripts blocking unauthorized field changes. | <b>Anxious</b> , due to inconsistent reporting metrics and untracked incident updates. |
