

Project Design Phase-II

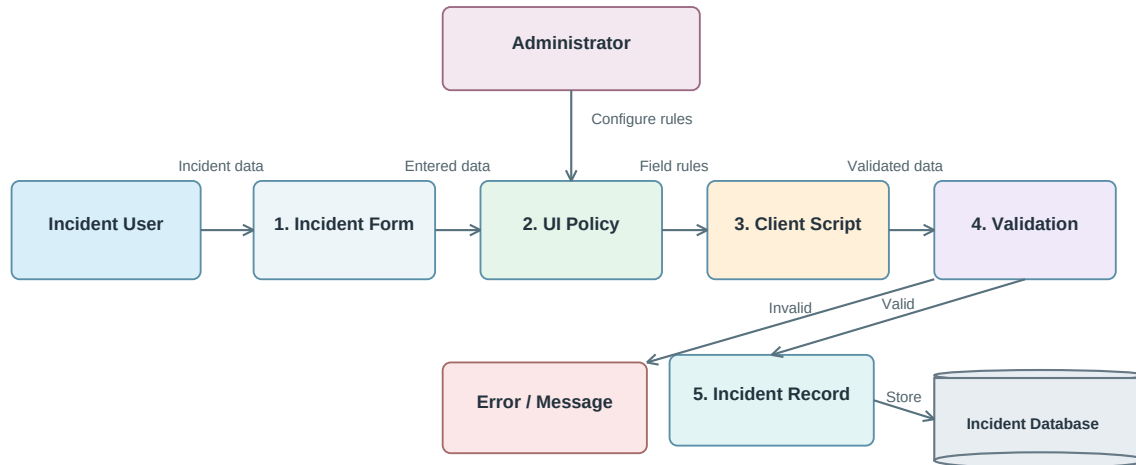

Data Flow Diagram & User Stories

Date	02 October 2026
Team ID	SWTID-2026-5622
Project Name	Implement Client Script and UI Policy inside Demraken Incident
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Project-specific DFD – Implement Client Script and UI Policy inside Demraken Incident

ServiceNow Incident DFD: data entry → UI Policy → Client Script → validation → Incident record/database.

Flow: Incident user enters Incident details → UI Policy controls conditional field behavior → Client Script performs dynamic validation/field updates → form validation checks required conditions → valid Incident is stored; invalid data produces an error/message for correction. Administrator configures the rules.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Incident User	Incident Data Entry	USN-1	As an incident user, I can enter Incident details through the Incident form.	I can enter the required Incident information.	High	Phase-I
Incident User	UI Policy	USN-2	As an incident user, I can see the configured field behavior when the Incident condition is met.	The UI Policy changes the configured field behavior according to the condition.	High	Phase-I
Incident User	Client Script	USN-3	As an incident user, I can receive client-side validation when the entered information does not satisfy the rule.	A validation message is displayed and incorrect submission is prevented when required.	High	Phase-I
Incident User	Validation & Save	USN-4	As an incident user, I can submit an Incident after the required conditions are satisfied.	Valid Incident data passes validation and the Incident record is saved.	High	Phase-I
Administrator	UI Policy Configuration	USN-5	As an administrator, I can configure UI Policy conditions and actions for the Incident form.	The configured UI Policy is active and applies to the Incident form.	High	Phase-I
Administrator	Client Script Configuration	USN-6	As an administrator, I can configure Client Scripts for Incident validation and field updates.	The Client Script executes according to its configured condition and logic.	High	Phase-I
Team	DFD & Documentation	USN-7	As a project team, we can document the Incident data flow and user requirements.	The DFD and user stories clearly represent the implemented Incident workflow.	Medium	Phase-I
