

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	2 October 2026
Team ID	SWTID-2026-5622
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	UI Policy Implementation for Incident Form	• Set conditional field behavior for High Impact incidents • Make specific fields mandatory when Impact is set to High • Dynamically hide or show fields based on incident conditions
FR-2	Client Script Field Validation	• Enforce real-time validation on user inputs before submission • Prevent form submission if required fields are missing or invalid • Display alert messages for incorrect data entry
FR-3	Data Auto-Population	• Automatically populate related fields based on user selection • Reduce manual data entry to improve reporting accuracy
FR-4	SLA & Triage Control	• Ensure Incident records meet defined business rules before creation • Maintain data integrity for proper incident routing and resolution

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Intuitive user interface with clear validation messages and automated inputs to save time and reduce user effort.
NFR-2	Security	Ensure only authorized roles (admin/configuration access) can modify UI policies and Client Scripts.
NFR-3	Reliability	Consistent client-side enforcement of business rules to ensure accurate data entry across all incident creations.
NFR-4	Performance	Client scripts and UI policies must execute instantly without causing lag in form rendering or submission.
NFR-5	Availability	Client-side scripts and policies must be available and functional across all standard ServiceNow supported web browsers.
NFR-6	Scalability	Designed modularly to easily accommodate future form modifications or additional table requirements.
