

Project Design Phase Proposed Solution Template

Date	02 October 2026
Team ID	SWTID-2026-5622
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The main problem is that Incident details may be incomplete. For High Impact incidents, Assignment Group or Assigned To may be empty and the Urgency may not be set correctly.
2.	Idea / Solution description	We use a UI Policy and Client Scripts in the Incident table. When Impact is High, Assignment Group is made mandatory and Urgency is made read-only. The scripts also set Urgency, check Assigned To and stop State changes from the list.
3.	Novelty / Uniqueness	The solution uses UI Policy with onChange, onSubmit and onCellEdit Client Scripts. Each one is used for a different requirement.
4.	Social Impact / Customer Satisfaction	It helps users enter better Incident details and reduces the need for manual correction.
5.	Business Model (Revenue Model)	This is mainly an internal ServiceNow solution. It helps the organization by saving time and improving Incident handling.
6.	Scalability of the Solution	The same method can be used for other Incident fields and other ServiceNow tables.
