|---------------|------------------------------------------------|
| Date          | 02 October 2026                                |
| Team ID       | SWTID-2026-5622                                |
| Project Name  | Implement Client Script & UI Policy (Incident) |
| Maximum Marks | 4 Marks                                        |

#### Solution Architecture:

This project uses ServiceNow Incident form/list, a UI Policy, and Client Scripts to control fields and validate Incident records.

- Apply field rules when Impact is 1 – High.
- Use onChange, onSubmit, and onCellEdit Client Scripts for the required validation.
- Keep Assignment Group, Assigned To, Urgency, and State behavior consistent.
- The flow is: user input → field control → validation → Incident record.

#### Project Solution Architecture Diagram:

**Figure 1: ServiceNow Incident UI Policy and Client Script solution architecture**

The diagram shows the Incident form/list, UI Policy, Client Scripts, validation, and final Incident record.
