

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	02 October 2026
Team ID	SWTID-2026-5622
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team Gathering & Goal:

Assembled our 4-member project team to collaborate on ServiceNow form validation and data integrity controls. This project focuses on implementing Client Scripts and UI Policies on the ServiceNow Incident form to improve user experience, enforce field behavior, and reduce incorrect data entry. The primary goal is to dynamically control form fields based on user actions and incident conditions without requiring the form to be submitted.

Problem Statement:

"How might we dynamically control field behavior and enforce client-side validation rules on the ServiceNow Incident form based on user actions and incident conditions, so that records are submitted with accurate, mandatory data without requiring form submission or degrading the user experience?"

Step-2: Brainstorm, Idea Listing and Grouping

Member 1

(UI Policy Specialist)

Idea 1: Create a UI Policy on the Incident table for "Impact = 1 - High" to dynamically make "Assignment group" mandatory without submitting the form.

Idea 2: Enable "Reverse if false" so form controls automatically revert when Impact changes away from High, ensuring seamless user experience.

Member 2

(UI Policy Action Lead)

Idea : Create a UI Policy Action to set the "Urgency" field to Read-only dynamically when Impact is High, controlling field behavior in real-time to prevent manual user overrides.

Member 3

(Client Script Developer - Form Validation)

Idea 1: Dynamically auto-populate "Urgency" to "1 - High" and display an informational message as soon as the user changes the Impact field to High.

Idea 2: Intercept form submission and block saving with an error box if the "Assigned To" field is empty on High Impact incidents.

Member 4

(Client Script Developer - List Governance & QA)

Idea: Block list-view inline editing on the "State" field to force users to open the incident form for proper status updates and validation.

Step-3: Idea Grouping & Clustering

Cluster A: Dynamic UI Policies <i>(Members 1 & 2)</i>	Cluster B: Client-Side Automation <i>(Member 3)</i>	Cluster C: Governance & List Security <i>(Member 4)</i>
High-impact trigger condition (Impact = 1 - High) [Member 1] Dynamic mandatory Assignment group control [Member 1] Read-only Urgency field enforcement [Member 2] Auto-reversal on condition change (Reverse if false) [Member 1]	Real-time value auto-population via on Change without form reload. Pre-submission mandatory validation and error banners via on Submit.	Restricting inline list editing for State field via on Cell Edit. End-to-end verification across form interactions and list views.

Step 4: Idea Prioritize
